DETAILED ACTION

Withdrawal of Finality

1. Based on Applicant's argument's submitted in the Appeal's Brief dated April 22, 2004, the finality of that action dated July 24, 2003 is withdrawn.

Terminal Disclaimer

2. The terminal disclaimer filed on June 25, 2004 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of patent number 6,222,131 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

3. Claims 1-30 and 81-84 are allowed.
4. The following is an examiner's statement of reasons for allowance: This invention deals with a flat electrical cable comprising an upper insulator layer; a lower insulator layer connected to the upper layer along substantially continuous parallel spaced seams; and an intermediate layer comprised of individual seams of conductors which lie adjacent and substantially parallel to the seams, wherein the conductors do not have an adhesive residue thereon, wherein the seams positioned between adjacent conductors have a textured surface pattern, and wherein the seams positioned along edges of the flat electrical cable have a substantially smooth surface pattern (claim 1). This invention

also deal with a flat electrical cable comprising an upper layer of polyester having a ribbed surface; a lower layer of polyester connected to the upper layer along substantially continuous parallel spaced apart ultrasonically bonded seams; and individual strands of copper conductors lying substantially parallel and adjacent to the seams between the upper and lower layers, wherein the seams positioned between adjacent conductors have a textured surface pattern, and wherein the seams positioned along edges of the flat electrical cable have a substantially smooth surface pattern (claim 18). This invention also deals with a flat electrical cable comprising: an upper layer of polyester having a ribbed surface; a lower layer of polyester connected to the upper layer along substantially continuous parallel spaced apart ultrasonically bonded seam and individual strands of copper conductors lying substantially parallel and adjacent to the seams between the upper and lower layers, wherein the seams positioned between adjacent conductors have a textured surface pattern, wherein the seams positioned along edges of the flat electrical cable have a first zone and a second zone, and wherein the first zone is adjacent to one conductor of the conductors and extends substantially parallel to the one conductor, and the first zone having a knurled textured surface pattern, and where the second zone is located between the first zone and one edge of the edges, and the second zone having a smooth textured surface patterns (claim 21). This invention also deals with a flat cable comprising an upper insulator layer; a lower insulator layer connected to the upper insulator layer along substantially continuous parallel spaced apart seams; and an intermediate layer comprised of groups which lie adjacent and substantially parallel to the seams, and

wherein the conductor group do not have an adhesive residue thereon (claim 22). This invention also deals with a flat electrical cable comprising: an upper insulator layer; a lower insulator layer connected to the upper layer along substantially continuous parallel spaced apart seams; and an intermediate layer comprised of individual strands of conductors which lie adjacent and substantially parallel to the seams, and the conductors do not have an adhesive residue thereon, wherein the seams positioned between adjacent conductors have a first textured surface pattern, and wherein the seams positioned along edges of the flat electrical cable have a second surface pattern, and wherein a surface roughness of the first textured surface pattern is greater than a surface roughness of the second textured surface pattern (claim 30). The above stated claim limitations, in combination with other claim limitations, is not taught or suggested by prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

5. Applicant's arguments filed April 22, 2004 have been fully considered and they are persuasive. Specifically, applicant's argument that Hara does not have a cable with seams positioned between adjacent conductors that have a textured surface pattern but rather discloses a cable with an intermediate layer of conductors disposed between two

Art Unit: 2831

layers of tape (col. 1, lines 61-68) and seams with only smooth surfaces as indicated by the shade lines in Fig. 3, is persuasive and therefore the claims have been allowed.
